MEASURES TO PREVENT SPREAD OF TYPHOID IN ALBANIA

In accordance with the instructions of the Ministry of Public Health on preventing the spread of typhoid in the country, especially in Durres Rreth, the public health section held a meeting of its workers to discuss the necessary measures for vaccinating workers and the population with Soviet polyvaccine. This vaccine has proved very successful.

During March, lectures will be given in labor and manufacturing centers to explain to the working classes the necessity for this struggle against typhoid and the immunity provided by Soviet polyvaccine.

Under the current plan, 6,000 more doses of polyvaccine will be prepared in 1952 than in 1951.
